Wood Treated Right™

In February 2008, Peterson Wood Treating, Inc. introduced a revolutionary new pressure-treated product to its service area Wolmanized® L<sup>3</sup> Outdoor® Wood. After nearly 10 years of development and testing, Arch Treatment Technologies, Inc. has commercialized the first non-metallic, carbon-based wood preservative for residential use. Peterson is a licensed producer of wood treated with this preservative.

Production of Wolmanized® L<sup>3</sup> wood utilizes the same pressure treatment process employed in the past, but the truly innovative preservative distinguishes L<sup>3</sup> wood from other products. This EPA-registered preservative includes NO copper or other metals to protect lumber.

Evaluated by ICC Evaluation Service in report ESR 1477 and listed by the American Wood Protection Association (AWPA), L<sup>3</sup> wood is recognized by industry organizations. Furthermore, its performance is backed by Arch's lifetime limited warranty.

L<sup>3</sup> wood is less corrosive to HDG and aluminum than CCA-treated wood. There are no restrictions on its use in contact with aluminum. Wolmanized® L<sup>3</sup> wood is no more corrosive than untreated lumber.

## Get the Performance You Want

and make sure your  
treated wood  
meets  
building  
codes

Look for  
**ALSC-Accredited  
Inspection**

The following agencies\* monitor treating plants to verify that wood is preserved in accordance with standards of the American Wood Protection Association.

Look for one of their symbols on your wood.

\* Accredited by the American Lumber Standard Committee (ALSC) www.ALSC.org

Without this inspection, you may buy material that won't last  
or won't meet building codes.

The Wolmanized name has long represented properly treated wood, and is the world's best known brand of pressure-treated wood. Its creators have been leaders in the introduction of new products, new technologies, and unique marketing programs.

Wolmanized wood products use only EPA-registered preservatives and are produced with mandatory third-party auditing programs. This testing program is in place to assure the dealer is purchasing lumber that meets industry specifications.

Your pressure treated lumber must have the proper quality tag. The tag needs to have the identity of an accredited inspection agency printed on the tag. Peterson Wood Treating is continually monitored by Timber Products Inspection.
